Work Experience

Software Engineer: GoDaddy

Software Engineer on API team at Godaddy

Kirkland, WA

Sep 2017 - Present

- **Java, Vert.x** – wrote features for the API Gateway, along with several other internal GoDaddy REST APIs; creating and project owning a new GoDaddy API from scratch; responsible for the full lifecycle of code
- **React JS, Javascript, Swagger** – containerized our old Developer Portal using Docker and Kubernetes, along with revamping, creating, and designing the new portal with the team using React JS and Swagger UI

Software Engineering Intern: AOL

Summer intern on ad client team at Adap.TV by AOL

San Mateo, CA

Jun 2016 – Sep 2016

- **Javascript, HTML/CSS** – wrote high-impact video infrastructure features that detected user percent viewability of an ad in current/parent windows to increase efficiency by estimated 500% and prevent publisher fraud
- **Python** – engineered logic to perform more efficient tests for both Javascript and Flash unit tests in house
- **Bash** – improved and fixed buggy internal testing logic to better capture network and beacon traffic of ads

IT and Web Dev Assistant: UC Davis

Student assistant in UC Davis Bioinformatics Core

Davis, CA

Nov 2015 - Current

- **Python, Jinja, RegEx, Javascript** – assisted Bioinformatics Core web developers with various applications, such as traversing OS paths and finding module lab packages available and displaying them in the Portal
 - **zsf** – allocated raids and memory pools, maintained drives, servers, and server rooms, installed GPU nodes
-

Projects

Delphi

/hack hackathon

2016

Javascript, HTML/CSS, Swift, XCode, JQuery

- engineered iOS and web application that determines if one can go stargazing tonight by scraping weather conditions and location using various APIs

Lilypad

Spectra hackathon

2016

Python, Flask, PostgreSQL, Javascript, HTML/CSS, JQuery

- implemented Youtube API, Google authentication, and front-end for web application that allows users to filter and upload potential roommate videos

asterisk*

HackDavis hackathon

2016

Javascript, JQuery, HTML/CSS, RegEx

- wrote a Chrome extension that highlights gender biased and derogatory language on a web page and offers gender neutral or inclusive suggestions
-

Extracurricular Experience and Honors

- **Secretary, Internal Vice President:** Officer, UC Davis Computer Science Club 2015-16, 2016-2017
